ANIMAL ODDITIES

8 surprising facts - including Mizu's and Mugi's relatives

1. ## Axolotls regrow

Axolotls can regrow legs, tails, parts of the heart and even parts of the brain. They stay 'young' all their lives.

2. ## Corgi history

Pembroke Welsh corgis were bred in Wales to herd cattle, nipping at heels while staying low to avoid kicks.

3. ## Octopus brains

An octopus has three hearts and about two-thirds of its neurons are in its arms, not its head.

4. ## Tardigrades

These tiny 'water bears' can survive drying out, freezing and even 10 days in the vacuum of space (ESA FOTON-M3, 2007).

5. ## Blue whale

The blue whale is the largest animal ever known, up to about 30 m long. Its heart weighs about 180 kg - roughly the size of a golf cart, not a car as often claimed.

6. ## Crows remember faces

Crows can recognise individual human faces and remember people who treated them badly for years.

7. ## Dogs smell in 3D

Dogs have up to 300 million scent receptors (we have about 6 million) and smell separately with each nostril.

8. ## Mantis shrimp

A mantis shrimp's club accelerates faster than a .22 bullet, hitting about 23 m/s (80 km/h), and can crack aquarium glass.

WOW NUMBER

An axolotl can regrow the same limb over and over, and scientists study them to learn about healing.
